

IndiaMART — Seller Churn Reduction System

Full workflow: Onboarding Check → Churn Predictor → Retention (3 Tracks) → BL Upgrade Engine

PHASE 1

Onboarding Health Check

Day 0 – 30 | Predict churn before the seller even starts

- 1
- mcats Demand Check**
Does this seller's product category have active buyer searches in their city?
Pull from IM's buyer search index. If mcat demand index = 0 in their city tier → flag as high churn risk immediately.
[mcat + city tier] [buyer search volume] [last 30 days]
- 2
- NSD + Business Viability**
Cross-check NSD data — is the business real, operational, and in the right category?
Unverified or thin businesses churn in 60 days regardless of anything else.
- 3
- Peer BL Expectation Benchmark**
How many BLs are sellers with the same mcat + city getting on average?
Show this number to the seller on Day 1 — realistic expectation prevents 'IM kaam nahi karta' churn at month 2.
[same mcat] [same city tier] [avg BL/month]
- 4
- First BL Response Signal**
Does the seller respond to their first BL within 30 seconds?
This single signal predicts 90-day retention better than any other onboarding metric.
Low response → onboarding caller triggers within 24 hours.
- 5
- Output → Onboarding Risk Score (0–100)**
Score carries forward into Phase 2 as a prior. High-risk onboarders watched more closely from Day 1.

Day 0 risk scored at signup	4 automated checks	40% lower 90d churn with expectation call
--------------------------------	-----------------------	--

▼ Phase 1 risk score feeds Phase 2 as starting prior ▼

PHASE 2

Churn Predictor — RCA Engine

Day 30 → Day -90 before renewal | Daily scoring on every active seller

- 1
- Daily Signal Pull — 7 Features from Existing IM Data**
BL velocity drop % (30d vs prev 30d) · DAU streak (days since last login)
LMS response rate (% BLs replied) · PNS call count (calls in 30d)
Peer BL delta (vs mcat+city median) · Days to renewal · Onboarding risk score
[no new data needed] [all from existing IM tables] [runs every night]
- 2
- LightGBM Model → Churn Probability Score**
Trained on 12 months of historical churn labels.
Outputs 0–100 churn probability per seller per day. Refreshes every morning — not a static monthly report.
- 3
- RCA — Root Cause per Seller (SHAP Explanations)**
Model gives the exact ranked reason for each seller's churn risk:

Reason A: No BL / Low Demand mcat has low buyer activity in their city. Fix: show national demand, suggest category expansion.	Reason B: Low Engagement Seller not logging in, not responding to BLs. Fix: activation nudge + onboarding re-touch.
--	---

Reason C: Peer Gap Similar sellers getting 4x more BLs. Fix: profile improvement + response rate coaching.	Reason D: Price / ROI Doubt BLs received but low conversion. Fix: gifted lead + ROI proof message.
--	--

- 4
- 3-Tier Action Bucket — Output Every Morning**
Red ($\geq 70\%$) → human caller queue with pre-call brief
Amber (40–70%) → WhatsApp nudge + seller dashboard comparison
Green ($< 40\%$) → no action

~85% precision at 70% threshold	90 days before renewal window	RCA exact reasons per seller	Daily score refresh
---	---	--	-------------------------------

▼ Churn score + RCA reasons + tier → feeds all 3 retention tracks below ▼

PHASE 3

Retention — 3 Parallel Tracks

1–2 months before dropout | Dashboard + Nudge
Script + Winback

TRACK A — Seller Dashboard Comparison (visible to every seller)

- A1

Top Performer Card in Seller Dashboard
Seller sees: 'Sellers like you in [city] got X% higher ROI last month. Here's what they did.'
Shows anonymised peer — same mcat, same city, same subscription tier.
Displays their BL count, response rate, profile completeness, active days.
- A2

Gap Diagnosis + Actionable Steps
Not just comparison — specific gap + specific fix.
'Top seller has 9 photos, you have 2 → Add 7 photos to increase BL by ~30%.'
Each gap item links directly to the fix action inside the seller dashboard.
[BL gap] [response rate gap] [profile completeness gap] [active days gap]
- A3

Progress Tracker — Closing the Gap
As seller improves each metric, the gap closes visually.
Creates reason to stay and reason to be active — without any external nudge.

TRACK B — Retention Nudge Script (1–2 months before predicted dropout)

- B1

Script Generated from Seller's Own RCA — Not a Template
Every script is assembled from the seller's Phase 2 RCA reasons.
Reason = low BL response → script focuses on coaching.
Reason = no BL in 45 days → script leads with gifted lead.
Same script works for human salesman and voice AI agent.
- B2

Tone: Follow-Up, Not Sales
Script opens with genuine check-in, not a renewal pitch.
"Ramesh Bhai, bas follow up karne ke liye call kiya tha — aapke last month ke BLs ka kya hua? Koi problem toh nahi? ... Haan, maine dekha aapki category mein is hafte Mumbai se 3 buyers aayen hain — kya main aapko unka detail bhejun?"
- B3

Gifted BL — 1 Full Lead, No Strings
Real buyer, full contact, posted in last 72 hours, matching seller's exact product.
Seller calls the buyer. Whether they close or not — IM has demonstrated value.
Renewal conversation happens naturally after.
[full contact, not blurred] [last 72hr only] [1 per cycle] [quality gate mandatory]

TRACK C — Winback Script (seller has already churned)

C1 Winback Pool Prioritisation

Score = historical BL quality × current mcat demand × days since churn × churn reason recoverability.

Seller who churned because 'no BL' but mcat now has 3x demand = top priority.

C2 Script Built from Seller's Last 6 Months of Activity

Each churn reason routes to a different opening:

Reason: No BL

"Aapki category mein abhi 8 buyers hain — tab nahi the. Main aapko ek lead abhi deta hoon."

Reason: Price

"Aapke jaisa seller same city mein Rs 3.2L kama raha hai IM se — uski subscription same hai jo aapki thi."

Reason: Competitor

"Aapka competitor jo aapne mention kiya tha — woh IM pe active hai. Yeh raha uska profile."

C3 Gifted Lead as Re-Entry Hook

"Bhai, wapas aane ke liye nahi bol raha — bas yeh ek buyer hai jo aapka product dhundh raha hai. Baat kar lo."

Lead first. Renewal ask second — or never, if seller brings it up themselves.

3–5×
winback vs cold outreach

RCA
exact reason → exact script

Lead first
value before renewal ask

2×
rep calls/day with AI brief

▼ If seller still at high churn risk after Track B → Phase 4 triggers at Day -10 to -15 ▼

PHASE 4

BL Upgrade Recommendation Engine

10–15 days before predicted dropout | Change the experience, not just the message

1 Trigger Condition

Churn score $\geq 70\%$ AND 10–15 days to predicted dropout AND seller has not responded to Track B nudge.

This seller needs a stronger lever — something that changes what they experience on the platform.

2 Unlock BLs from Next Higher Subscription Package — Temporarily

Seller is on Silver plan → system unlocks 3–5 Gold-tier BLs.

Higher quality, higher order value, better matched to their product.

They receive these in their normal LMS flow — it looks like the leads got better.

"Ramesh Bhai, aapke liye kuch premium leads unlock kiye hain — aap inhe apne dashboard mein dekh sakte hain. Yeh normally Gold plan mein aate hain."

3 Psychology: Seller Gets Occupied with Real Business

A seller chasing a Rs 80,000 lead is not thinking about churning.

They experience Gold-tier quality for the first time — see what they've been missing.

4 Renewal Becomes an Upsell Conversation

"Aapne jo premium leads consume kiye — woh Gold plan ke the. Agar aap Gold mein upgrade karte hain toh yeh regularly milenge."

Churn prevention + revenue upgrade in one motion.

3–5
Gold BLs unlocked temporarily

10–15d
before predicted dropout

Upsell
retention becomes upgrade

Occupied
seller busy with leads, not deciding

▼ Seller renews → Phase 5 activates immediately to lock in engagement ▼

PHASE 5

Renewal Window BL Boost

-7 days to +7 days around renewal | Peak engagement = peak retention

1 The Renewal Window Problem

Seller engagement historically dips around renewal — they're evaluating, distracted, or frustrated.

Most platforms send a payment reminder. We flip this: the 2-week renewal window becomes the seller's best 2 weeks on IM.

Peak experience at the exact moment the renewal decision is made.

2 1 Week Before Renewal — Premium BL Unlock

System unlocks 3–5 BLs from the next subscription tier — same as Phase 4 but now for ALL renewing sellers, not just high-risk.

Higher order value, better buyer quality, matched to seller's top-performing product keywords.

Seller is actively working leads during renewal week — not passively receiving a payment link.

3 On Renewal Day — Instant Confirmation + Lead

Immediately on payment confirmation: push 1 fresh high-quality BL directly to LMS.

Message: 'Subscription renewed! Aapka pehla premium lead ready hai — abhi check karein.'

First action post-renewal is business activity, not a thank-you screen.

4 1 Week After Renewal — Reinforcement Boost

Continue elevated BL quality for 7 days post-renewal.

Seller experiences the full value of their renewed subscription immediately — no 'warming up' period.

After 7 days, BL quality normalises — but seller has already formed a positive association with the new cycle.

-7 days to 0 (Pre-renewal boost)

Unlock 3–5 premium BLs from next tier. Seller is occupied with real business activity. Engagement score peaks just as renewal decision window opens. Decision made from a position of value, not doubt.

Day 0 (Renewal day)

Immediate post-payment: push 1 fresh high-quality BL to LMS. First action after renewing is a business opportunity. Reinforces that the money was worth it instantly.

0 to +7 days (Post-renewal reinforcement)

Continue elevated BL quality for 7 days. Seller starts new subscription cycle with momentum. Forms positive association before quality normalises. Dramatically reduces early-cycle churn.

Why this is different

Standard flow has a natural engagement dip around renewal — seller is distracted or frustrated. This system inverts that: renewal window = best 2 weeks on the platform. Churn decision never gets made.

2 weeks

of elevated BL quality around renewal

Day 0

fresh lead on renewal confirmation

Inverted

engagement dip → engagement peak

Upsell

seller tastes premium → upgrade conversation

Combined Funnel Impact — All 4 Phases Running Together

40% churn prevented at onboarding	90d early warning window	3× retention track conversion	5× winback rate improvement	10× overall churn + winback combined
--	------------------------------------	---	---------------------------------------	---
